

# Digitalize Asset Lifecycle Management with Hexaware's Workplace Lifecycle Management (WLM)

Hexaware offers Workplace Lifecycle Management (WLM), a comprehensive solution with a unified platform for end-to-end asset lifecycle management that enables seamless integration of request fulfillment, procurement, and asset inventory modules (see Figure 1). WLM helps you manage two key areas - IT needs of employees from hire to retire, and end user asset lifecycle management. Our integrated, optimized, and semi-automated solution helps you gain complete visibility and control of your IT asset portfolio to drive incremental business value.

**Our solution provides a high level of automation that allows users to:**

Use existing purchase order (PO) and auto populate PO line items using existing information in the service request

Effortlessly create asset records and update asset status in real time

Check inventory based on user location and requested model, and create transfer orders with a single click

## Get Better Control and Maximize Efficiency Manage enterprise-wide IT assets from a single platform

Comprehensive IT asset management, superior IT service delivery, and seamless user experience are every IT asset manager's top priorities. However, lack of integration between request fulfillment, procurement, and asset inventory modules and lack of a single interface to manage end-to-end hire-to-retire asset lifecycle make it challenging to drive desired outcomes. Furthermore, existing inventory management processes require extensive manual intervention and are error-prone, tedious, and time consuming. It is critical to gain better control of IT assets in order to optimize productivity, avoid unplanned expenses, and provide easy access to information for informed decision making.

## Minimize Complications. Optimize Bottom Line.

Build comprehensive capabilities to effortlessly manage, maintain, and secure your enterprise IT asset portfolio with Hexaware's WLM service offering. Some of your key benefits are:

- **Reduced total cost of ownership** through proactive and accurate inventory management
- **Improved user experience** with easy access to support and workflows
- **Timely and informed purchase decision making** through real time updates and visibility into asset depreciation
- **Minimized productivity impact** through timely discovery and deployment of required assets in the network
- **Brings efficiency to Support functions** by enabling single interface to manage asset lifecycle.

**Partner with us. Optimize your IT infrastructure. Ensure application availability.**
