Hexaware accelerates your journey
to the cloud at scale

www.hexaware.com

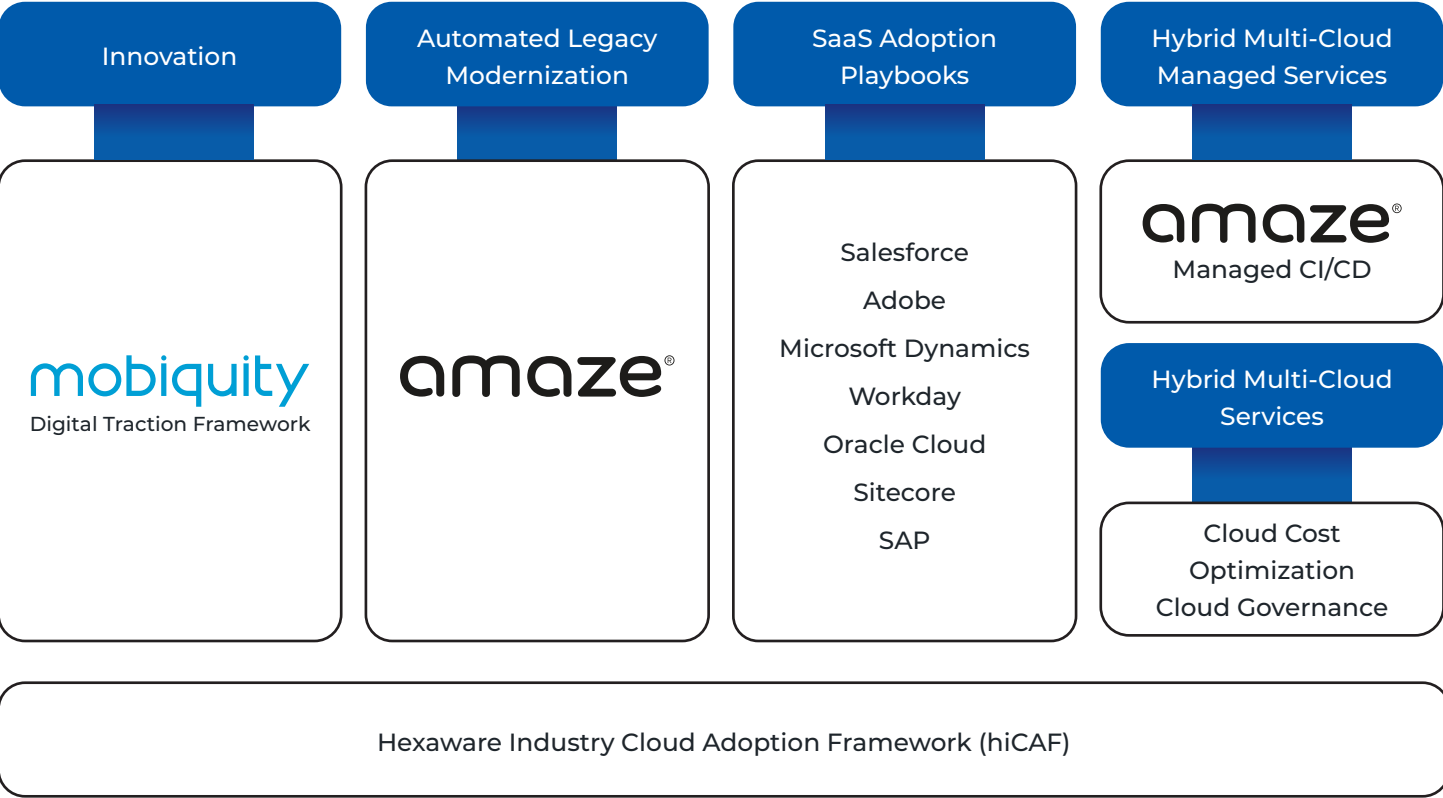

The transition from an existing ecosystem, like a centralized datacenter or legacy applications, to the cloud is a gargantuan task with many potential directions. It's a major shift for any organization, hence, calls for expertise and a high level of automation to drive the change at scale.

Hexaware's Cloudify Everything® is one of its three strategic pillars. It is solely focused on supporting customers on their journey to the cloud and their business on the cloud. The amaze® suite of offerings covers the transformation of enterprises to ensure that a range of solutions and services are made to work in a plug and play mode, enabling a swift and efficient execution.

Amaze® covers the major phases of cloud migration - from discovery through assessment to lift & shift, from refactoring to cloud-native development. This enables customers to decide the path to digitalization, examining each business process and application. We deliver high scale throughput by using automation and our proprietary configurations and tools. We ensure that the target implementations do not lock you with a specific cloud or provider.

Here is a quick overview on our scope of cloud transformation services:

The core phases we apply to drive change with our clients are.

Discovery, Assessment and Planning

Assessment and planning of workloads are the most important aspects of any cloud migration project. While many organizations are eager to start their cloud journey, challenges of traditional environments run wide and deep. Amaze® utilizes an automated way of discovering and assessing your workloads. The discovery can be done in multiple environments across many datacenters with a single view of all the devices and software.

- Agent-less Discovery
- Application and Services Mapping (dependency mapping)
- Performance Heat Map
- Code-level Analysis
- TCO & Price Modelling for Cloud
- Move Group Definition

Unified and simplified cloud provisioning

Many consider that infrastructure building is a one-time activity. But with the advent of public cloud and use of code, it has become easier to provision complex environments within a few minutes. Hexaware has a repository of hundreds of such scripts for AWS, Azure and even VMWare that can be leveraged by our customers to quickly provision and build environments.

- Provision/de-provision, dev/test environments mirroring the production environments
- Proactively solve performance issues, monitor and manage capacity
- Rapidly provision complete application stacks
- Control costs on cloud by automatically scaling up and down when required.
- Adopting concepts such as continuous delivery and continuous integration that automate most of the development process than just resource provisioning.
- Automate time consuming administrator tasks like backup, recovery, etc.

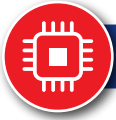

Factory-based migration of applications

The traditional methods of cloud migration leave a lot to be desired. They are cumbersome, costly and always have downtime. Our automated approach has been designed and built specifically for cloud migration to AWS, GCP and Azure. We execute high performance and secure workload migrations into the cloud with a factory approach at scale.

- Fast and secure workload migration
- Minimal manual intervention required
- No impact on the production during migration
- Supports all types of OS and Hypervisors
- Can perform complex and bulk migrations
- Helps getting out of technical debt as part of the process (e.g. Windows Server 2008 legacy systems)

Driving digital transformation by moving applications to containers and micro services

Backed with deep experience of enterprise cloud migration and rigorous research, Hexaware has developed a proprietary and automated application re-factoring solution for a fast and efficient move into containers and the world of micro services. Amaze® can automatically analyze application code, re-factor them based on their criticality and move them to any public cloud platform. Its automation capabilities have been specifically designed to efficiently move applications built on Java and .NET.

Key Benefits of Amaze®

- Reduces time across all stages to deliver application mass transformation with high efficiency
- Makes it possible to scan, analyze, review, and re-factor millions of lines of code with high efficiency and drastically reduced timelines
- Ensures zero impact on business functionality
- Offers code transformation from old technology to a new technology as well as code generation for new features that are needed on the cloud
- Is highly flexible for customized re-platforming/factoring and containerization solutions that require portability for different types of applications

Cloud Lifecycle Management and Orchestration

Ensuring continued operations according to governance, compliance, performance and flexibility requirements is one of the biggest challenges post migration. Especially in a multi-cloud world, where a single pane of glass becomes a key feature. Our range of solutions enables customers to run their hybrid/multi cloud application/ infrastructure setup in an automated way. The platform provides a unified view that stitches the customer's disparate physical and cloud infrastructure ranging from on-premises private cloud to provider-enabled public cloud. We help customers focus on value topics while we cover operations in a managed services approach.

- End-to-End Service Catalog
- Metering, billing and chargeback
- Billing dashboard
- Multi-cloud Integration
- Marketplace
- Brokerage and Orchestration
- Integration with Existing ITSM and Monitoring tools

Financial Management on Cloud (FinOps)

Keeping cloud cost under control is a key element in realizing the cloud benefits. Hexaware offers cloud cost optimization engagement to understand and optimize your current cloud cost. Based on this we empower our customers to stay on top of cloud usage and discover their optimization potential.

- Monitor usage and spending over time
- Get cost-effective sizing recommendations
- Allocate costs for chargeback
- Set alerts for unusual or overspending
- Identify seasonal patterns for better auto-scaling

Advantages: Cloudify Everything® and Amaze® drive your transformation at scale

Cloudify Everything® is Hexaware's outcome-driven strategy to help organizations reap the benefits of cloud transformation using automation, managed services, blueprint templates for building cloud architectures and ringing cultural change. The separation of applications and infrastructure from digital innovation through traditional architecture, deployment and operations has led to a disconnect in transformation speeds. We transform the traditional ecosystem at scale and with speed and aim to break the separation between legacy and innovation.

Innovate with Cloud

Accelerate Cloud Adoption

Optimize Cloud Operations

About Hexaware

Hexaware is the fastest growing next-generation provider of IT, BPO and consulting services. Our focus lies on taking a leadership position in helping our clients attain customer intimacy as their competitive advantage. Our digital offerings have helped our clients achieve operational excellence and customer delight by 'Powering Man Machine Collaboration.' We are now on a journey of metamorphosing the experiences of our customer's customers by leveraging our industry-leading delivery and execution model, built around the strategy— Automate Everything®, Cloudify Everything®, Transform Customer Experiences®.

We serve customers in Banking, Financial Services, Capital Markets, Healthcare, Insurance, Manufacturing, Retail, Education, Telecom, Hi-Tech & Professional Services (Tax, Audit, Accounting and Legal), Travel, Transportation and Logistics. We deliver highly evolved services in Rapid Application prototyping, development and deployment; Build, Migrate and Run Cloud solutions; Automation-based Application support; Enterprise Solutions for digitizing the back-office; Customer Experience Transformation; Business Intelligence & Analytics; Digital Assurance (Testing); Infrastructure Management Services; and Business Process Services.

Hexaware services customers in over two dozen languages, from every major time zone and every major regulatory zone. Our goal is to be the first IT services company in the world to have a 50% digital workforce.
