- CTO

INNOVATION

Three stages. One pipeline.

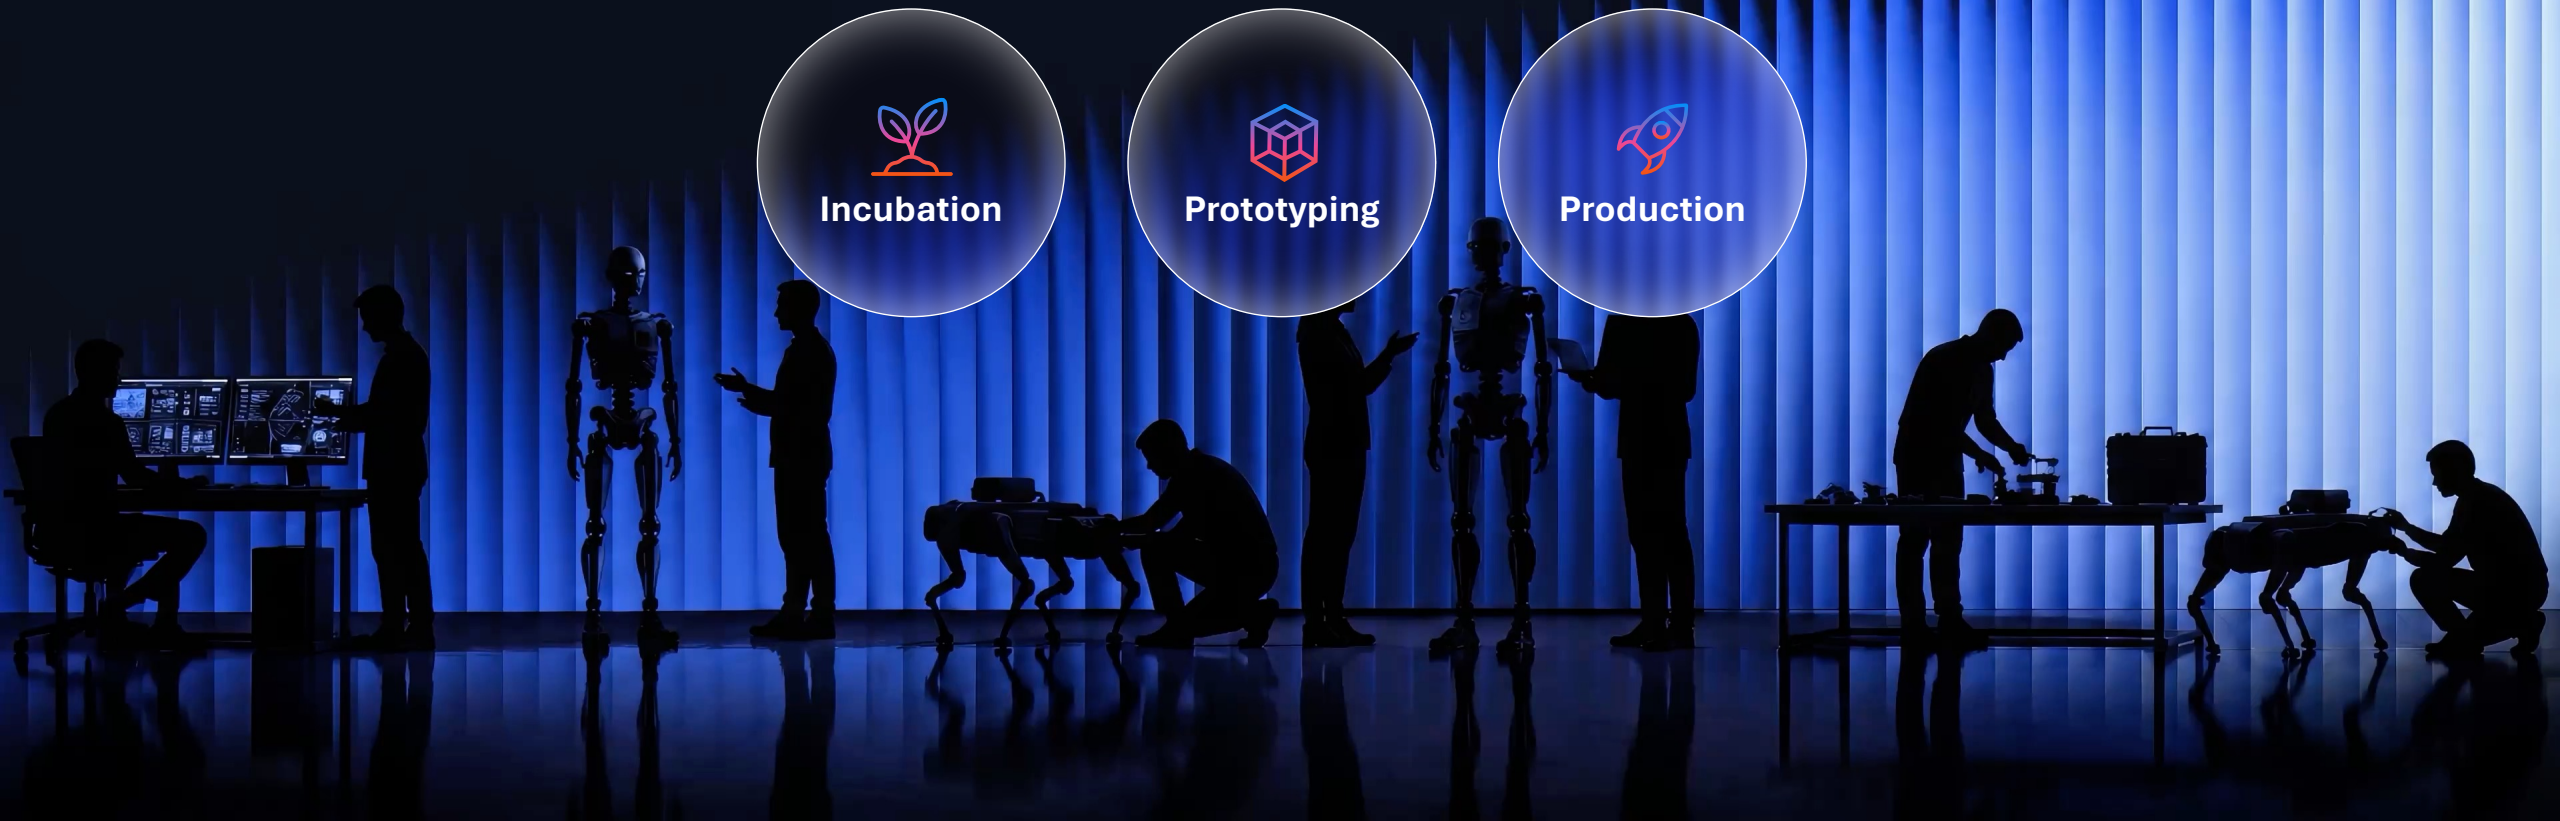

Incubation

Prototyping

Production

Three stages. One pipeline.

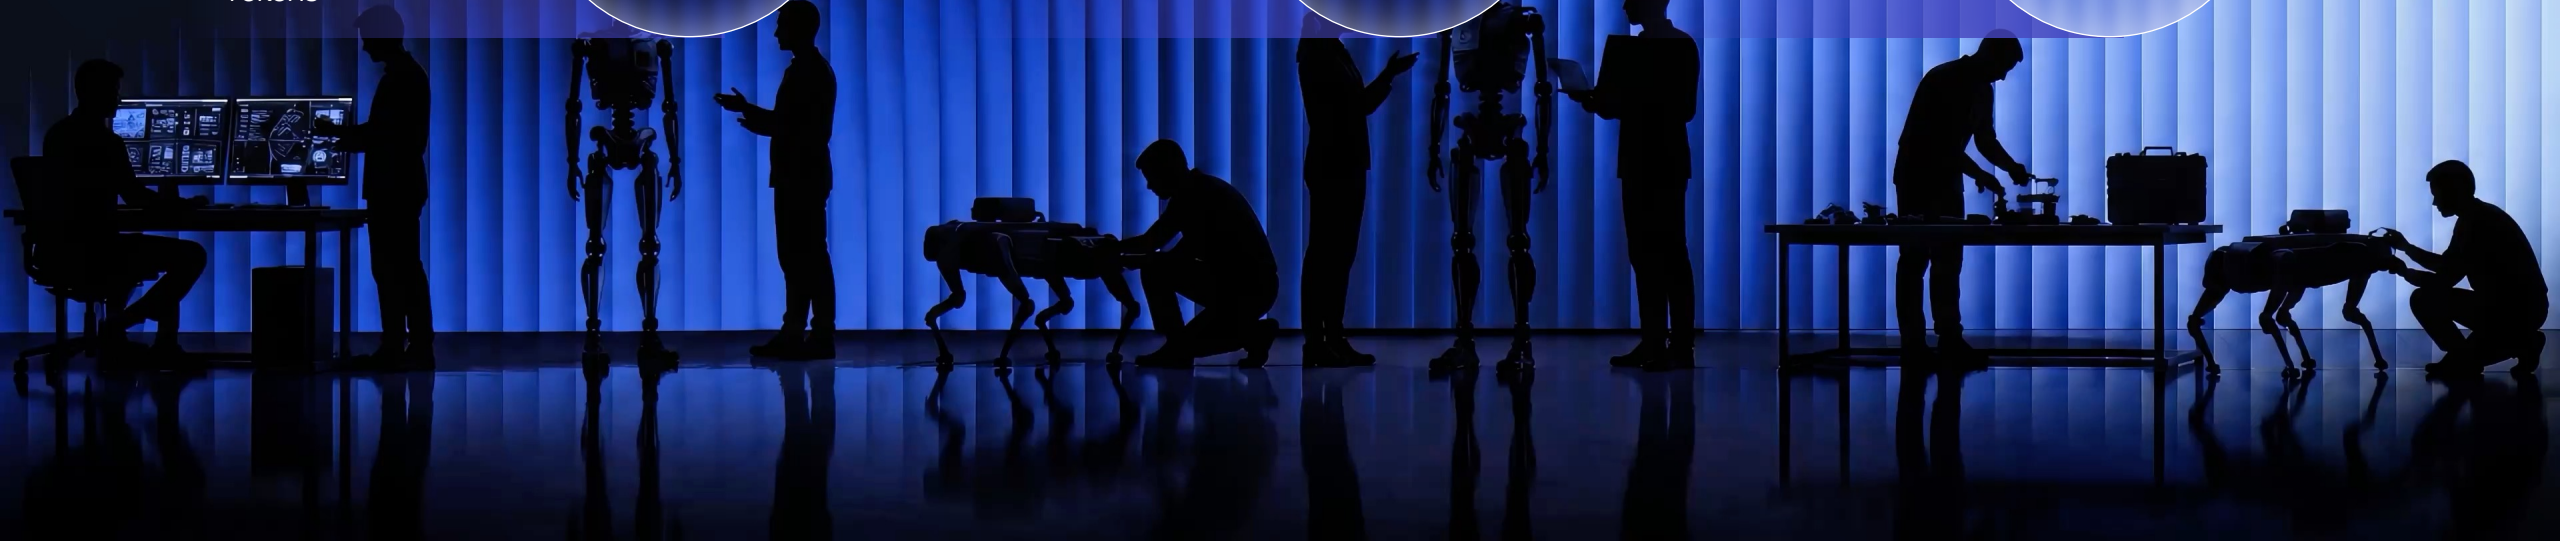

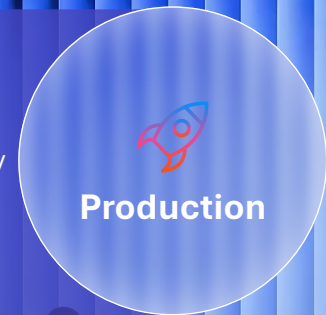

1. Recursive Jailbreaking
2. Robotics Red Teaming
3. Looking Glass
4. Invisible Reasoning Tokens

1. Agentic Behavior Analytics
2. Bio Mirror

1. Agentverse
2. Zero Vulnerability
3. Zerovity

Incubation

The bets we're nurturing

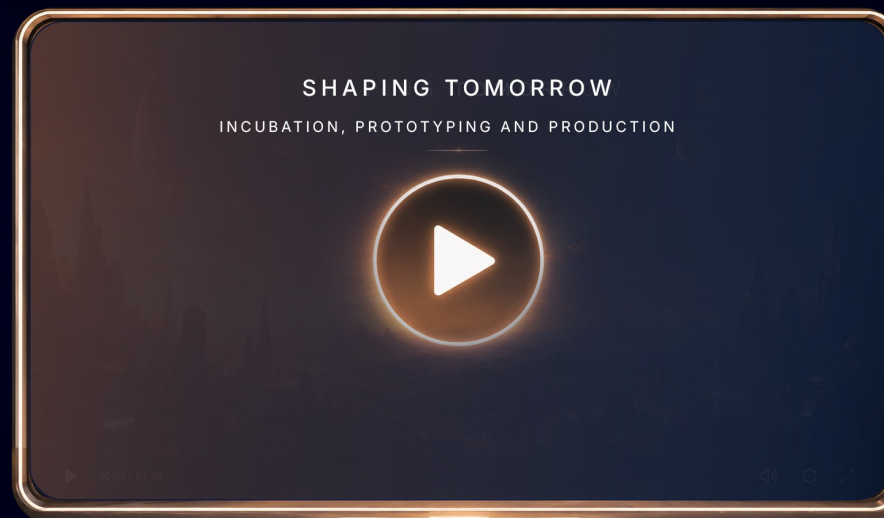

1. Recursive Jailbreaking

- Finds security gaps in autonomous systems before attackers do.
- Helps teams build safer and more resilient robotic platforms.

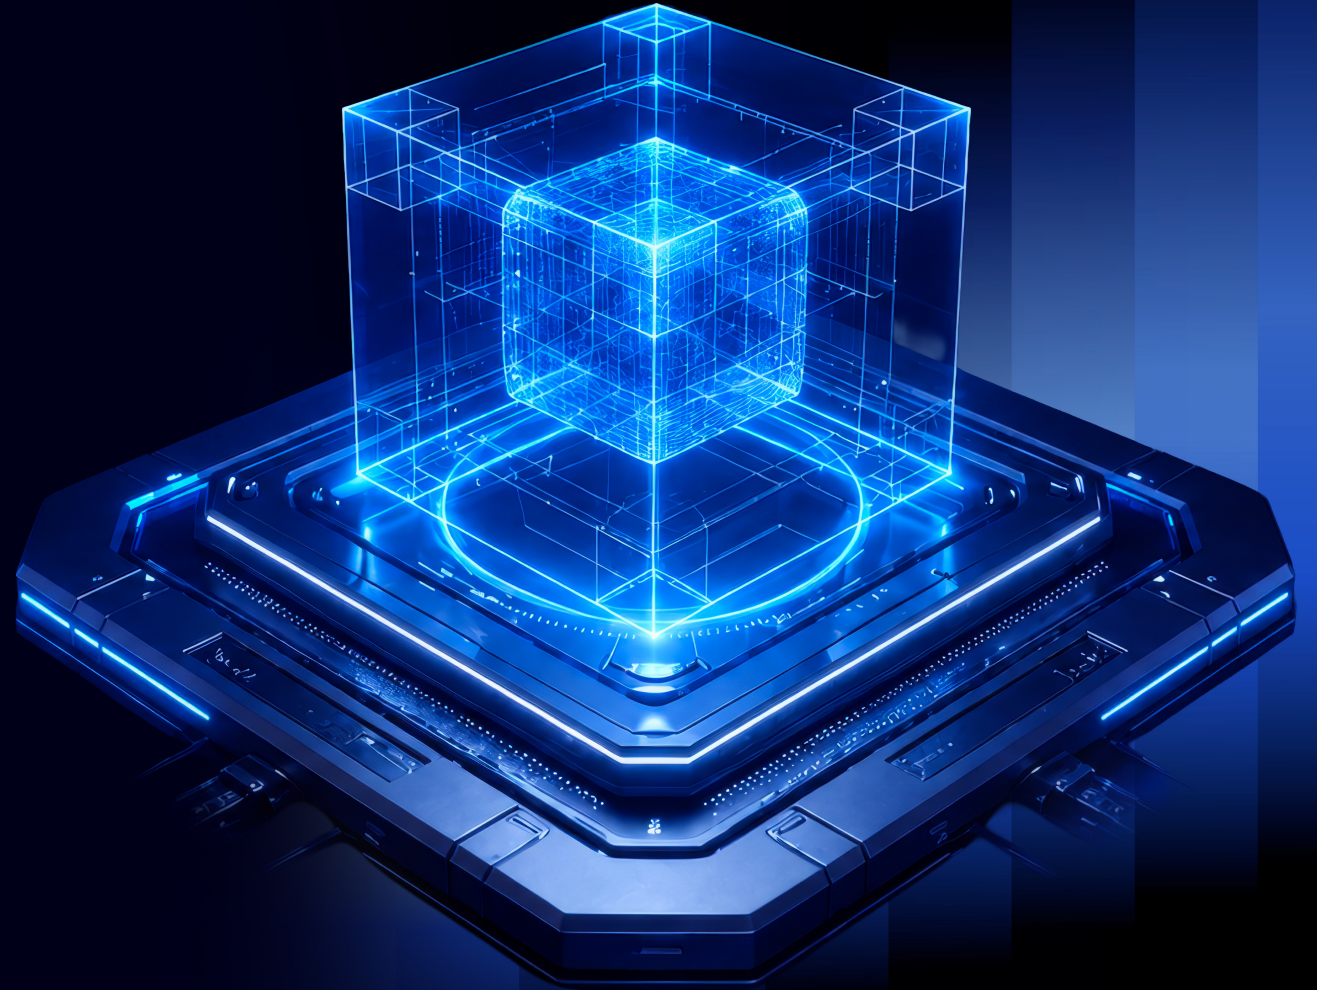

2. Robotics Red Teaming

3. Looking Glass

4. Invisible Tokens

Prototyping

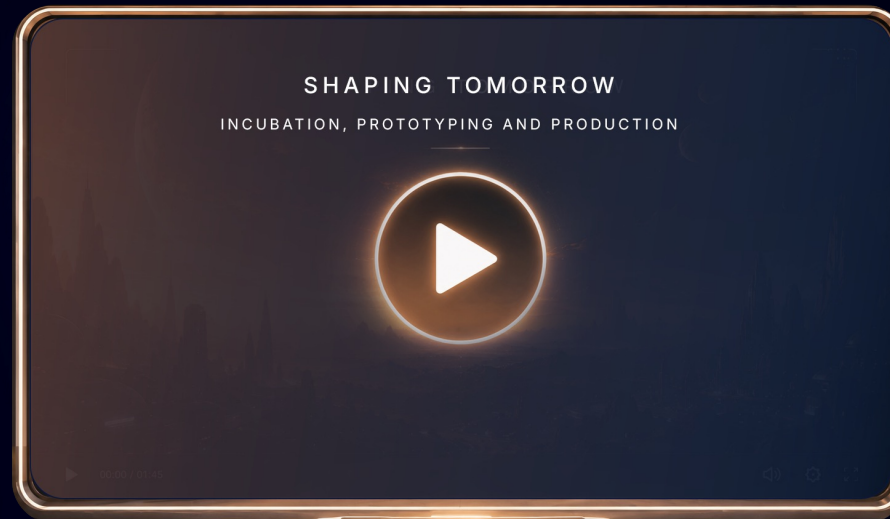

What's proving out

1. Agentic Behavior Analytics

- Generates behavioural fingerprints for agents using ontology-driven tensor embeddings.
- Detects behavioural drift, anomalies, and governance risks from production interactions.

2. Bio Mirror

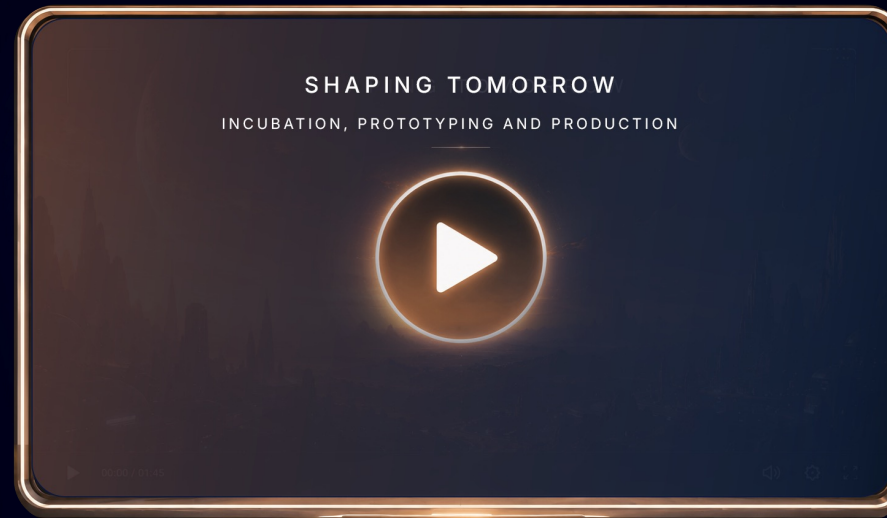

What's proving out

1. Agentic Behavior Analytics

2. Bio Mirror

- Uses AI-powered facial analysis to derive 30+ physiological biomarkers in real time.
- Delivers contactless health assessment using only standard camera hardware.

Production

Zero Friction

1. Agentverse

- **Enables anyone to build multi-agent applications** from BRDs using a low-code experience.
- Automatically generates workflows, configures agents and LLMs, with support for Microsoft Agent Framework, AGNO, and AWS.

2. Zero Vulnerability

3. Zerovity
